

AI-901 Microsoft Azure AI Fundamentals - Complete Certification Course

A beginner-friendly course for understanding AI concepts and building lightweight AI solutions with Microsoft Foundry and Azure AI services.

AI-901 Microsoft Azure AI Fundamentals - Complete Certification Course

A beginner-friendly course for understanding AI concepts and building lightweight AI solutions with Microsoft Foundry and Azure AI services.

Best fit for students starting their Azure AI journey and needing a practical foundation before deeper AI engineering topics.

Product overview

This CloudXeus course introduces foundational AI concepts, responsible AI principles, generative AI, agentic AI, text, speech, vision, and information extraction scenarios in Azure. The course connects each concept to small hands-on tasks so learners can move from definitions to simple implementations.

Product field	Value
Course code	AI-901
CloudXeus SKU	CX-AI901-FOUNDATIONS-2026
Course title	AI-901 Microsoft Azure AI Fundamentals - Complete Certification Course
Primary audience	Beginners in AI, junior developers, data learners, cloud learners, and business technologists exploring Azure AI
Level	Fundamentals / beginner
Format	Short lessons, guided portal demos, lightweight Python examples, quizzes, and revision checkpoints
Estimated learning time	10 hours video plus 6 guided mini-labs
Access period	12 months from enrollment

Product field	Value
Instructor support	Q&A forum support with lab troubleshooting guidance
Practice assets	2 practice tests, quick revision notes, sample prompts, and lightweight code snippets
Voucher included	No. This product does not include a Microsoft exam voucher.

Who this course is for

- Students who are new to AI services on Azure and want a structured entry point.
- Developers who know basic Python syntax and want to understand Microsoft Foundry capabilities.
- Professionals who need to explain AI workloads, responsible AI, and Foundry-based solution patterns.

Prerequisites

- Basic cloud awareness is helpful but not mandatory.
- Basic Python syntax is recommended for code examples.
- A Microsoft Azure account is useful for optional hands-on practice.

Exam alignment and course coverage

Aligned to the official Microsoft Learn study guide for AI-901, with skills measured as of April 15, 2026.

Exam-aligned skill focus

Approximate weighting from Microsoft Learn study guide

AI concepts and capabilities

40-45%

Foundry AI implementation

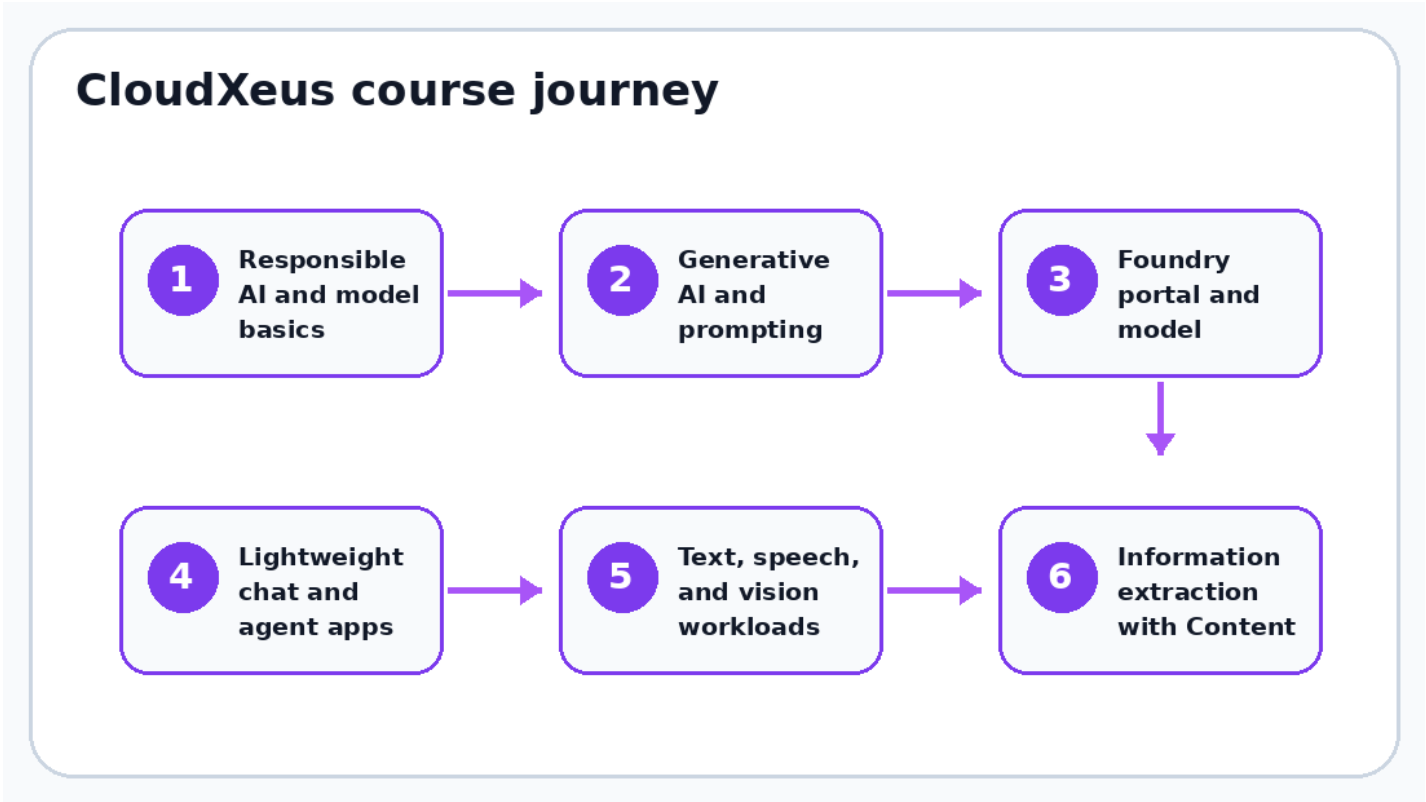

55-60%

Use this image to test PDF indexing of both text blocks and embedded visuals.

Skill area	Official weighting	How the course prepares students
Identify AI concepts and capabilities	40-45%	Explains responsible AI, model capabilities, deployment choices, generative AI, agentic AI, text, speech, computer vision, image generation, and information extraction scenarios.

Skill area	Official weighting	How the course prepares students
Implement AI solutions by using Microsoft Foundry	55-60%	Shows how to use Foundry to deploy models, test prompts, create a lightweight chat app, build simple agents, use speech and vision capabilities, and extract information with Content Understanding.

Module map

Detailed course content

Module	What students learn
Module 1: Responsible AI and model basics	Describe fairness, reliability and safety, privacy and security, inclusiveness, transparency, and accountability in AI solutions.
Module 2: Generative AI and prompting	Understand how generative AI models work, identify model capabilities, and create effective system and user prompts.
Module 3: Foundry portal and model deployment	Navigate Microsoft Foundry, deploy a model, select deployment options, and test model behavior in the portal.
Module 4: Lightweight chat and agent apps	Build a small chat client and a simple single-agent solution using Foundry concepts and SDK patterns.
Module 5: Text, speech, and vision workloads	Identify text analysis, speech, multimodal, computer vision, and image generation scenarios and map them to Azure services.
Module 6: Information extraction with Content Understanding	Use Content Understanding concepts to extract information from documents, forms, images, audio, and videos.

Hands-on labs and assets

Lab asset	Description
Lab 1 - Prompt playground warm-up	Create system and user prompts and observe model behavior in Foundry.
Lab 2 - Deploy and test a model	Deploy a model and test simple interactions from the portal.
Lab 3 - Lightweight chat client	Connect a simple Python client to a Foundry project and send chat requests.
Lab 4 - Single-agent demo	Create and test a simple agent in the Foundry portal.
Lab 5 - Speech and vision prompts	Use deployed models or tools to respond to speech or visual input scenarios.
Lab 6 - Document extraction concept demo	Analyze how Content Understanding can extract structured fields from a document.

Learning outcomes

- Identify common AI workloads and the Azure services that support them.
- Explain responsible AI principles in simple business language.
- Use Microsoft Foundry to test prompts, models, and a simple agent workflow.
- Recognize when to use generative AI, speech, vision, text analysis, and information extraction capabilities.

Support and product policies

Policy topic	CloudXeus product statement
Enrollment access	Learners receive access to course videos, downloadable lab guides, sample code or datasets where applicable, and revision notes for 12 months.
Instructor Q&A	Students can ask course-related questions about concepts, labs, setup steps, and troubleshooting. Response times vary by volume.
Exam updates	Course content is periodically reviewed against Microsoft Learn study guides and major service updates.
Practice tests	Practice questions are included for revision. They are not official Microsoft exam questions and should be used for preparation only.
Certificate	A CloudXeus completion certificate is available after course completion. It is not a Microsoft certification.
Refunds	Refunds follow the purchasing platform policy. If bought through Udemy, Udemy refund rules apply.
Exam voucher	No certification exam voucher is included unless explicitly stated in a separate promotion.
