

## AZ-104 Microsoft Azure Administrator - Complete Certification Course

A practical Azure administration course focused on identity, storage, compute, networking, monitoring, governance, and day-to-day cloud operations.

## AZ-104 Microsoft Azure Administrator - Complete Certification Course

A practical Azure administration course focused on identity, storage, compute, networking, monitoring, governance, and day-to-day cloud operations.

Best fit for learners who want to manage real Azure environments and prepare for the Azure Administrator certification path.

### Product overview

This CloudXeus course prepares learners to implement, manage, and monitor Azure resources across identity, governance, storage, compute, networking, and operational monitoring scenarios. The course is designed for learners who want more than theory: every major section connects the exam topic to a practical cloud administration task.

| Product field           | Value                                                                                                                    |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------|
| Course code             | AZ-104                                                                                                                   |
| CloudXeus SKU           | CX-AZ104-ADMIN-PRO-2026                                                                                                  |
| Course title            | AZ-104 Microsoft Azure Administrator - Complete Certification Course                                                     |
| Primary audience        | Azure administrators, cloud support engineers, junior cloud engineers, and IT professionals moving into Azure operations |
| Level                   | Associate / intermediate                                                                                                 |
| Format                  | On-demand video lessons, guided demos, lab notes, practice questions, and revision checkpoints                           |
| Estimated learning time | 18 hours video plus 10 guided labs                                                                                       |
| Access period           | 12 months from enrollment                                                                                                |
| Instructor support      | Q&A forum support with lab troubleshooting guidance                                                                      |

| Product field    | Value                                                                         |
|------------------|-------------------------------------------------------------------------------|
| Practice assets  | 2 practice tests, lab walkthroughs, revision PDF, and command reference notes |
| Voucher included | No. This product does not include a Microsoft exam voucher.                   |

Who this course is for

- Learners who administer Azure resources or support Azure infrastructure teams.
- Students preparing for the AZ-104 exam and wanting a structured revision path.
- Cloud engineers who need stronger operational knowledge of identity, storage, compute, networking, and monitoring.

Prerequisites

- Basic knowledge of operating systems, networking, servers, and virtualization.
- Comfort using the Azure portal, PowerShell or Azure CLI, and basic cloud terminology.
- A test Azure subscription is recommended for hands-on practice.

Exam alignment and course coverage

Aligned to the official Microsoft Learn study guide for AZ-104, with skills measured as of April 17, 2026.

| Skill area                             | Official weighting | How the course prepares students                                                                                                                         |
|----------------------------------------|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Manage Azure identities and governance | 20-25%             | Covers Microsoft Entra users and groups, Azure roles, subscriptions, management groups, tags, policies, locks, budgets, and governance design decisions. |

| Skill area                                | Official weighting | How the course prepares students                                                                                                                                |
|-------------------------------------------|--------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Implement and manage storage              | 15-20%             | Walks through storage account configuration, Blob containers, Azure Files, redundancy, lifecycle management, soft delete, access keys, SAS, and network access. |
| Deploy and manage Azure compute resources | 20-25%             | Includes virtual machines, VM scale sets, App Service, containers, ARM/Bicep deployment concepts, sizing, scaling, and common operational tasks.                |
| Implement and manage virtual networking   | 15-20%             | Explains virtual networks, subnets, peering, NSGs, route tables, private endpoints, service endpoints, DNS, Bastion, and load balancing concepts.               |
| Monitor and maintain Azure resources      | 10-15%             | Includes Azure Monitor metrics, log queries, alerts, action groups, Network Watcher, backup, recovery, and resource health troubleshooting.                     |

## Module map

## Detailed course content

| Module                                         | What students learn                                                                                                                                              |
|------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Module 1: Azure identity and governance        | Manage Microsoft Entra users and groups, assign roles, apply governance controls, configure resource groups, and understand subscriptions and management groups. |
| Module 2: Storage accounts and Blob services   | Create and secure storage accounts, use Blob containers and Azure Files, configure redundancy, access controls, lifecycle rules, and data protection features.   |
| Module 3: Azure compute and containers         | Deploy and configure virtual machines, App Service, containers, scale sets, deployment templates, sizing options, and scaling strategies.                        |
| Module 4: Virtual networking and secure access | Design virtual networks, subnets, peering, NSGs, routes, service endpoints, private endpoints, DNS, Bastion, and load balancing patterns.                        |
| Module 5: Monitoring, alerts, and backup       | Use Azure Monitor metrics and logs, create alerts, use Network Watcher, plan backup and recovery, and troubleshoot common operations issues.                     |
| Module 6: Exam revision and scenario practice  | Review exam-style scenarios, decision points, and common traps across identity, storage, compute, networking, and monitoring domains.                            |

## Hands-on labs and assets

| Lab asset                                       | Description                                                                                                |
|-------------------------------------------------|------------------------------------------------------------------------------------------------------------|
| Lab 1 - Role assignment and governance baseline | Create a resource group, apply tags, assign Azure RBAC roles, and configure a basic policy.                |
| Lab 2 - Secure Blob storage                     | Create a storage account and Blob container, test access keys and SAS, and configure soft delete.          |
| Lab 3 - Deploy a virtual machine                | Create a VM, configure disks, network settings, and basic monitoring.                                      |
| Lab 4 - App Service deployment                  | Deploy a simple web app, configure scaling, custom settings, and deployment slots conceptually.            |
| Lab 5 - Networking diagnostics                  | Build a virtual network, NSG rules, route table concepts, and validate connectivity with diagnostic tools. |
| Lab 6 - Azure Monitor alerts                    | Create metrics alerts and query logs to diagnose resource behavior.                                        |

## Learning outcomes

- Explain the core responsibilities of an Azure administrator in a production environment.
- Configure common Azure identity, governance, storage, compute, networking, and monitoring services.
- Interpret scenario questions and choose Azure services or settings based on business requirements.
- Build a practical revision plan aligned to the official AZ-104 skills measured.

# Support and product policies

| Policy topic      | CloudXeus product statement                                                                                                                    |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| Enrollment access | Learners receive access to course videos, downloadable lab guides, sample code or datasets where applicable, and revision notes for 12 months. |
| Instructor Q&A    | Students can ask course-related questions about concepts, labs, setup steps, and troubleshooting. Response times vary by volume.               |
| Exam updates      | Course content is periodically reviewed against Microsoft Learn study guides and major service updates.                                        |
| Practice tests    | Practice questions are included for revision. They are not official Microsoft exam questions and should be used for preparation only.          |
| Certificate       | A CloudXeus completion certificate is available after course completion. It is not a Microsoft certification.                                  |
| Refunds           | Refunds follow the purchasing platform policy. If bought through Udemy, Udemy refund rules apply.                                              |
| Exam voucher      | No certification exam voucher is included unless explicitly stated in a separate promotion.                                                    |

---
