

DP-700 Implementing Data Engineering Solutions Using Microsoft Fabric - Complete Certification

A hands-on Fabric data engineering course covering ingestion, transformation, orchestration, security, monitoring, optimization, streaming, and OneLake patterns.

DP-700 Implementing Data Engineering Solutions Using Microsoft Fabric - Complete Certification Course

A hands-on Fabric data engineering course covering ingestion, transformation, orchestration, security, monitoring, optimization, streaming, and OneLake patterns.

Best fit for data engineers who want to build and operate Fabric data pipelines, lakehouses, warehouses, notebooks, and real-time solutions.

Product overview

This CloudXeus course prepares learners to implement data engineering solutions in Microsoft Fabric. It focuses on data loading patterns, orchestration, pipelines, notebooks, PySpark, SQL, KQL, OneLake, security, monitoring, optimization, streaming, and operational troubleshooting.

Product field	Value
Course code	DP-700
CloudXeus SKU	CX-DP700-FABRIC-DATAENG-2026
Course title	DP-700 Implementing Data Engineering Solutions Using Microsoft Fabric - Complete Certification Course
Primary audience	Data engineers, analytics engineers, Fabric engineers, cloud data professionals, and pipeline developers
Level	Associate / intermediate
Format	Technical video lessons, Fabric engineering labs, notebook and pipeline demos, monitoring exercises, and revision checkpoints
Estimated learning time	22 hours video plus 12 guided labs

Product field	Value
Access period	12 months from enrollment
Instructor support	Q&A forum support with lab troubleshooting guidance
Practice assets	2 practice tests, sample data, pipeline templates, notebook snippets, and revision PDFs
Voucher included	No. This product does not include a Microsoft exam voucher.

Who this course is for

- Data engineers implementing Fabric ingestion, transformation, orchestration, and monitoring solutions.
- Developers working with PySpark, SQL, KQL, notebooks, pipelines, Eventstreams, and Eventhouses.
- Analytics teams building production-grade data engineering workflows for Microsoft Fabric.

Prerequisites

- Experience manipulating and transforming data with SQL, PySpark, and KQL is recommended.
- Understanding of data ingestion and orchestration patterns is helpful.
- Access to a Microsoft Fabric environment is recommended for labs.

Exam alignment and course coverage

Aligned to the official Microsoft Learn study guide for DP-700. The Microsoft page lists a skills-measured objective set effective July 21, 2026.

Exam-aligned skill focus

Approximate weighting from Microsoft Learn study guide

Use this image to test PDF indexing of both text blocks and embedded visuals.

Skill area	Official weighting	How the course prepares students
Implement and manage an analytics solution	30-35%	Covers Fabric workspace settings, lifecycle management, version control, database projects, deployment pipelines, security, governance, audit logs, OneLake security, and orchestration choices.
Ingest and transform data	30-35%	Teaches full and incremental loads, batch and streaming patterns, Dataflow Gen2, notebooks, KQL, T-SQL, OneLake shortcuts, mirroring, pipelines, PySpark, SQL, KQL, and data quality handling.
Monitor and optimize an analytics solution	30-35%	Explains monitoring Fabric items, ingestion, transformations, semantic model refresh, alerts, pipeline errors, Dataflow errors, notebook errors, Eventhouse and Eventstream errors, and performance optimization.

Module map

Detailed course content

Module	What students learn
Module 1: Fabric workspace and lifecycle	Configure Spark, domain, OneLake, and Apache Airflow settings; understand version control, database projects, and deployment pipelines.
Module 2: Security, governance, and OneLake	Implement workspace and item access controls, row-level and file-level controls, dynamic data masking, sensitivity labels, audit logs, and OneLake security.
Module 3: Batch ingestion and transformation	Design full and incremental data loads, choose stores, create shortcuts, implement mirroring, ingest with pipelines, and transform with PySpark, SQL, and KQL.
Module 4: Streaming and Real-Time Intelligence	Choose streaming engines, work with Eventstreams and Eventhouses, process streams with KQL or Spark structured streaming, and create windowing functions.
Module 5: Orchestration with pipelines and notebooks	Design schedules, event-based triggers, parameters, dynamic expressions, and orchestration patterns using notebooks and pipelines.
Module 6: Monitoring, troubleshooting, and optimization	Monitor Fabric items, diagnose errors, configure alerts, and optimize lakehouse tables, pipelines, warehouses, Eventstreams, Eventhouses, Spark, and query performance.

Hands-on labs and assets

Lab asset	Description
Lab 1 - Configure a Fabric engineering workspace	Review workspace settings, Spark configuration, and OneLake options.
Lab 2 - Build a batch ingestion pipeline	Create a pipeline to load sample data into a lakehouse or warehouse.
Lab 3 - Transform data with notebooks	Use PySpark and SQL to clean, join, aggregate, and denormalize data.
Lab 4 - Use OneLake shortcuts and mirroring concepts	Review shortcut and mirroring scenarios for data access.
Lab 5 - Streaming data pattern walkthrough	Explore Eventstreams, Eventhouse concepts, and windowing function scenarios.
Lab 6 - Monitor and troubleshoot Fabric items	Review alerts, pipeline errors, notebook errors, and performance optimization actions.

Learning outcomes

- Implement Fabric data engineering patterns for batch, streaming, and orchestration workloads.
- Secure and govern analytics solutions with Fabric workspace, item, and OneLake controls.
- Transform data using PySpark, SQL, and KQL for analytical consumption.
- Monitor, troubleshoot, and optimize Fabric data engineering workloads.

Support and product policies

Policy topic	CloudXeus product statement
Enrollment access	Learners receive access to course videos, downloadable lab guides, sample code or datasets where applicable, and revision notes for 12 months.
Instructor Q&A	Students can ask course-related questions about concepts, labs, setup steps, and troubleshooting. Response times vary by volume.
Exam updates	Course content is periodically reviewed against Microsoft Learn study guides and major service updates.
Practice tests	Practice questions are included for revision. They are not official Microsoft exam questions and should be used for preparation only.
Certificate	A CloudXeus completion certificate is available after course completion. It is not a Microsoft certification.
Refunds	Refunds follow the purchasing platform policy. If bought through Udemy, Udemy refund rules apply.
Exam voucher	No certification exam voucher is included unless explicitly stated in a separate promotion.
